This St. Patrick's Day ...

Instead of following the rainbow to a pot of gold

Follow your phone or GPS to hidden treasures

What is Geocaching?

Geocaching is a high-tech treasure hunting game played throughout the world by adventure seekers using a GPS device or your smart phone.

What is Geocaching?

The basic idea is to locate hidden containers, called geocaches,

outdoors, and

then share your experiences online.

Shop

What can a cache look like?

Cache containers come in all different shapes and sizes. Some are easy to find, and some are harder to find.

Waterproof plastic containers

Army Surplus Ammo Cans

Where might I find a Cache?

Where might I find a Cache?

What's inside a cache?

Every cache must contain at least one item – a log book that other cachers can sign to show that they have found the cache.

What's inside a cache?

Larger caches usually also contain trade items called **swag**. Swag is different in every cache.

One Golden Rule

If you take something from a cache, you must leave something of equal or greater value.

So always bring some little treasures with you on your hunt to trade!

Other items in a cache

Some other things you might find in a cache besides swag are

Travel Bugs and Geocoins.

Geocoins and Travel Bugs

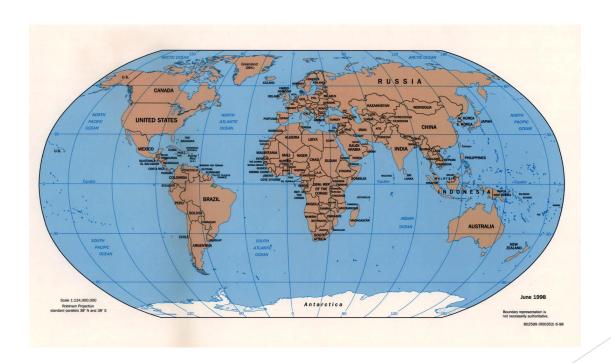

Geocoins and Travel Bugs want to travel from cache to cache.

Some have specific "missions" such as visiting a certain town.

Some just want to travel from cache to cache.

You should only take a travel bug or geocoin from a cache if you are going to put it in another cache.

Every spot on earth can be identified by a coordinate system – basically two numbers that tell you where you are.

There are numerous satellites orbiting the earth. These satellites transmit signals that a GPS receiver and your phone can read.

Based on these signals, the GPS receiver and your phone, can tell you where you are.

If you are using a GPS receiver, the spot where you are located can be identified by two numbers called coordinates.

A geocacher hides a cache somewhere and records the coordinates which can then be found by your GPS device and your phone.

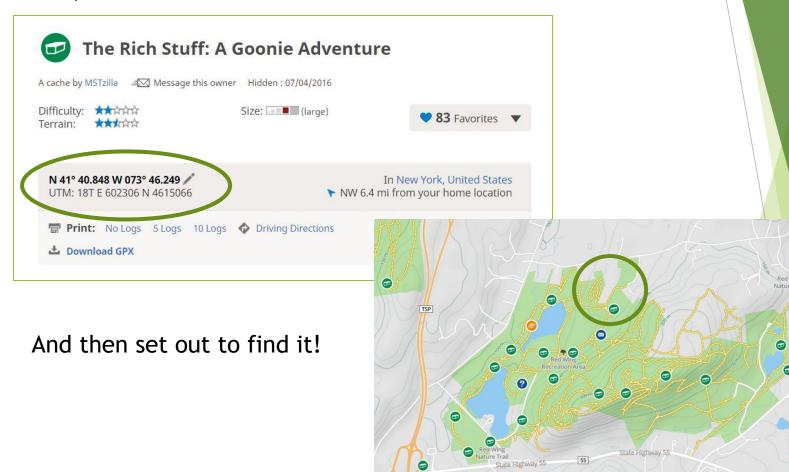

Then, the hider goes to geocaching.com and lists the coordinates where it is hidden.

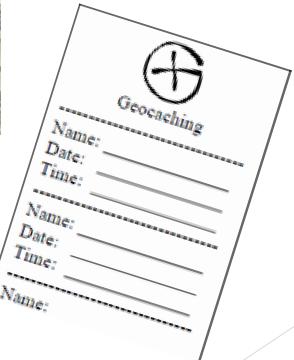

Geocache hunters can get:

- ▶ The coordinates of where a cache is hidden, or
- a map view

Geocache finders record their find in the log book inside the cash.

And then,

Geocache finders record their adventures online and whether or not they were able to find the cache, with a few comments.

Found it

IPIC! Easy find. I cleaned out some trash and a nest of ants that had taken residence in the box and left a LEGO minifig to keep watch on things.

How Much Does it Cost?

Other than the cost of a GPS receiver, or data rates on your smart phone, geocaching can be as free as you want it to be, or as expensive as you want it to be.

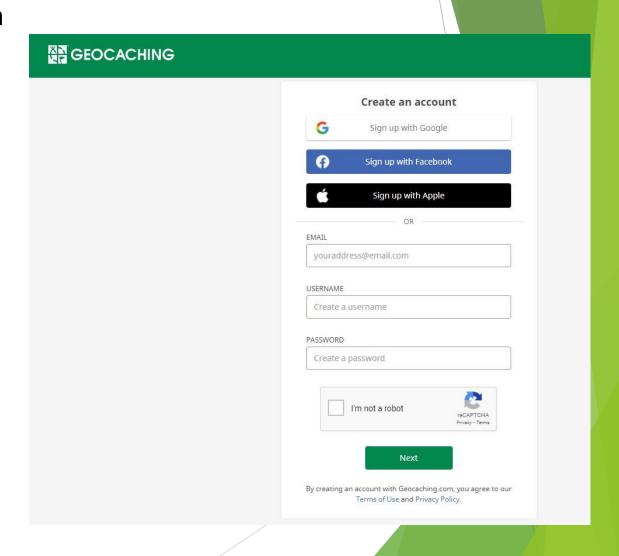

How Much Does it Cost?

If you are a Beekman Resident the Beekman Library and Beekman Rec have teamed up to help you get started! You can go to the library and borrow a GPS Unit!

How do you get Started?

Go to www.geocaching.com and register for a free account.

How to select and find a cache

- Enter the zip code you would like to search in and click "Search."
- You may look at the list OR click on the map to view the hidden caches in that area
- Choose any cache from the list, or the map and click on its name.
- Read about it there may be hints that you either want to see OR want NOT to see!
- ► If you are using a GPS Receiver, enter the coordinates (waypoint) of a cache and follow the direction arrow on the receiver until you find the hidden cache.
- If you are using a smart phone, use the map to locate your cache
